

It's time to update you on the lot of work that has been going on, behind the scenes, in the last period! First of all, 2021 saw us engaged in a request for an Amendment which, among other things, changed the partnership. We therefore welcome **Valmet** as a new partner in the project that will develop the heart of the LIFE STEAM prototype.

In December 2021, we also received **environmental authorization** to build the demonstration plant in Ozzano dell'Emilia (Bologna). By now almost everything is ready to start the prototype construction work that we plan to finish in the first part of 2023.

In the meantime, various preparatory **experimental activities** have been completed: we carried out a steam explosion test in Sweden and conducted different anaerobic digestion tests of green waste that will help us with the management of our prototype.

**Follow us to stay updated!**
