

LIFE STEAM was successfully presented at the **BIORESTEC conference**, held in the picturesque setting of Lake Garda. Our team showcased a poster illustrating the preliminary results of our laboratory work, carried out in **collaboration with CRPA - Centro Ricerche Produzioni Animali**.

These results represent a significant step forward in our commitment to developing sustainable and innovative solutions for the management of lignocellulosic residues.

With the data collected, the LIFE STEAM project is now ready to **move on to the next phase**: testing our technology on an industrial scale!
